TRANSPORTATION

Standard and custom designed load binders, binder assemblies, chain and fittings that allow for easy, secure tie down of oversized loads.

© LM Glasfiber

Wide variety of material handling equipment to maximize space usage, improve ergonomics, and optimize material flow throughout a facility. Maintenance and repair programs are also available to keep your products moving.

MANUFACTURING

© LM Glasfiber

The wind energy market has special material handling requirements. Not only are most of the components large, heavy, and being installed 80 meters in the air, but the manufacturing facilities are running at full capacity and in most cases are looking to expand. For this reason, it takes a wide range of material handling products to meet the diverse needs. Whether it is lift tables and cranes used on the manufacturing floor, tie downs used on the trucks transporting the equipment, rigging products used to install the wind turbines, or hoists used during maintenance of the wind turbines, let Columbus McKinnon be your complete source for material handling products and services.

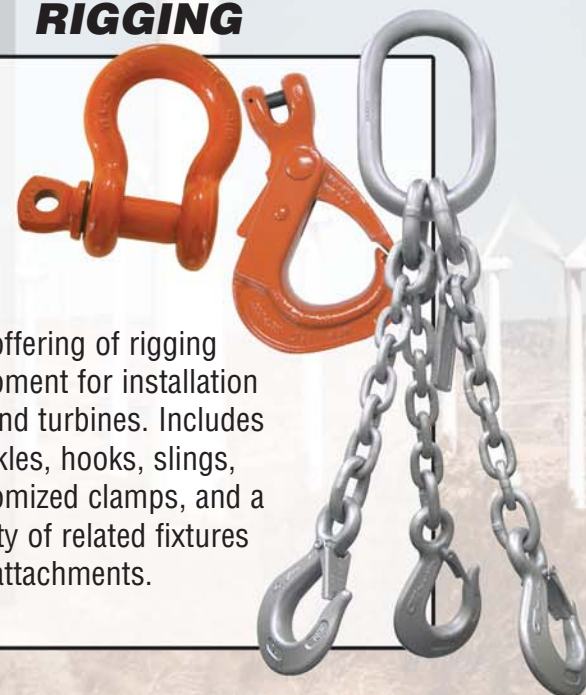

With more than 130 years of experience in the material handling industry and a family of the most widely recognized brands in the industry, Columbus McKinnon has the knowledge and expertise to create a material handling system specific to your needs. For more information, please contact Columbus McKinnon at 800-888-0985, sales@cmworks.com, or visit us on the web at www.cmworks.com.

RIGGING

Image Courtesy of Mortenson Construction

Full offering of rigging equipment for installation of wind turbines. Includes shackles, hooks, slings, customized clamps, and a variety of related fixtures and attachments.

MAINTENANCE

Grease lubricated electric chain hoists prevent issues associated with oil leaks and require minimal maintenance, saving time and money. Full line of manual hoists for positioning and pulling objects during maintenance activities.
